Along with the increased interest in individual differences in emotion regulation in recent years, there has been a proliferation of self-report measures of emotion-regulation strategies (see Table 1). These measures have advantages and disadvantages. Cognitive science has been instrumental in advancing our understanding of the onset, maintenance, and treatment of depression. Research conducted over the last 50 years supports the proposition that depression and risk for depression are characterized by the operation of negative biases, and often by a lack of positive biases, in self-referential processing, interpretation, attention, and ... Abuse is the improper usage or treatment of an entity, often to unfairly or improperly gain benefit. Abuse can come in many forms, such as: physical or verbal maltreatment, injury, assault, violation, rape, unjust practices, crimes, or other types of aggression. To these descriptions, one can also add the Kantian notion of the wrongness of using another human being as means to an end rather ... The Narcissistic Personality Inventory (NPI) is the most widely used measure of narcissism in social psychological research. Although several versions of the NPI have been proposed in the literature, a forty-item forced-choice version (Raskin & Terry, 1988) is the one most commonly employed in current research.
